D-STRUCTURE MODELING OF 472-628.

MEDLINE-98054247; PubMed-9391039;

A Liu,Y., Ruoho A.E., Rao V.D., Hurley J.H.;

MICHAELYTIC mechanism of the adenylyl and guanylyl cyclases: model "Catalytic mechanism of the adenylyl and guanylyl cyclases: model and mutational analysis.";

T proc. Natl. Acad. Sci. U.S.A. 94:13414-13419(1997).

C -!- CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

C -!- ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRESENCE MAGNESIUM OR MANGANESE IONS.

C -!- SUBURIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.

C -!- SUBCELIULAR LOCATION: Cytoplasmic.

C -!- MICCELLANEOUS: THERE ARE TWO TYPES OF GUANYLATE CYCLASES: SOL FORMS AND MEMBRANE-ASSOCIATED RECEPTOR FORMS.

C -!- SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCLASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright.            CYCLASE ACTIVITY ON BINDING OF ANF.

-! CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE AND RECEPTORS: TWO WITH GUANYLATE CYCLASE ACTIVITY (ANP-A AND ANP-B) AND ONE (ANP-C) WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF ANP FROM THE CIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.
-!- SIMILARITY: SOME SIMILARITY WITH CONSERVED REGION OF CATALYTIC DOMAIN OF PROTEIN KINASES.
-!- SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCLASE
                                                                                                                               MEDIINE-91352095; PubMed-1679239;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (Guanylate cyclase)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: RECEPTOR FOR ATRIAL NATRIURETIC PEPTIDE. HAS GUANYLATE CYCLASE ACTIVITY ON BINDING OF ANF.
CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.
SUBCELLULAR LOCATION: Type I membrane protein.
MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE ANP RECEPTORS: TWAITH GUANYLATE CYCLASE ACTIVITY (AMP-A AND ANP-B) AND ONE (AMP-GWITCH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF AMP FROM THE CIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.
SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCLASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1038

1 58:1155-1162(1989).

1 58:1155-1162(1989).

FUNCTION: RECEPTOR FOR ATRIAL NATRIURETIC PEPTIDE. HAS GUANYLATE CYCLASE ACTIVITY ON BINDING OF ANF. SEEMS TO BE STIMULATED MORE. EFFECTIVELY BY BRAIN NATRIURETIC PEPTIDE (BMP) THAN BY ANP. CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

SUBCELLULAR LOCATION: Type I membrane protein.

MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE AND RECEPTORS: TWO MITH GUANYLATE CYCLASE ACTIVITY (AMP-A AND ANP-B) AND ONE (AMP-C)
                                                                                                                                                                                                                                                                                                                                                                                                                                                     WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF AND FROM THE CIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDUCTION.
SIMILARITY: SOME SIMILARITY WITH CONSERVED REGION OF CATALYTIC DOMAIN OF PROTEIN KINASES.
SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCLASI
                                                                                                                                                                                                                                                                                                                                                                                                             SIMILARITY: CONTAINS 1 PROTEIN KINASE-LIKE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1048
